Anesthesia and Surgery Consent Form

Date:_____ Owner's Name:_____

Animal's Name:_____ Breed:_____

Contact Numbers: (1)_____ (2)_____

Procedure(s): (1)_____ (2)_____ (3)_____

I understand that during the performance of the foregoing procedure or surgery, unforeseen conditions may be revealed that necessitate an extension of the procedure or surgery, or of different procedures than those set forth above. Therefore, I hereby consent to, and authorize, the performance procedures or surgeries as deemed necessary by the veterinarian. I have been advised as to the nature of the procedure(s) or surgery and the risks involved. I understand that results cannot be guaranteed.

At Parktown Veterinary Clinic, we take every precaution to reduce the risks involved with anesthesia and surgery. All patients are weighted and given a physical examination. In addition, because most anesthetics/sedatives are metabolized by the liver and excreted by the kidneys, we perform a pre-anesthetic blood profile prior to surgery for pets under the age of 5 years and a general health profile for pets over the age of 5 years.

Your pet will have an intravenous catheter placed before anesthesia. An intravenous catheter provides a direct route to the bloodstream. The use of intravenous fluids during surgery facilitates adequate cardiovascular performance, reduces stress on the heart, assists in maintaining your animal's temperature, hydration, blood pressure, and reduces the time it takes for your animal to fully recover from anesthesia. While undergoing the procedure, your animal will receive anesthetic drugs that prevent pain. Because we care about your animal's comfort and strongly believe that pain relief is important, additional pain medications will be provided, as needed, to control the level of your animal's discomfort both after surgery and during their recovery at home.

We offer the ResQ Microchip Identification System. If you desire, we can implant the microchip while your pet is under anesthesia. The cost of the microchip placement is $40. There is no registration fee or annual fee.

( ) Yes, Please Microchip my pet today ( ) No, I decline microchipping today

( ) I am unsure if my pet has a microchip, please scan and if not, microchip my pet today.

Cold Laser therapy following a surgical procedure can result in decreased pain, swelling and faster healing times. The cost of this treatment is $30.

( ) Yes, I would like postoperative laser therapy for my pet

( ) No, I decline postoperative laser therapy for my pet.

I am the owner or agent of the above described animal and have the authority to execute this consent. I hereby consent and authorize the performance of the following procedures listed above by signing this document.

Signature of Owner/Agent:_____ Date:_____
